The Electrode Company

New IrDA wireless serial data link

The Electrode Company Ltd specialises in non-invasive monitoring, optical sensors and high performance pulse oximetry. The unique Lightman® portable microspectrometer is now available with it's own dedicated IrDA infrared wireless serial data link. This will allow the user to automatically download key data to any other IrDA device such as a PC Laptop or PDA.

Downloaded data can then be rapidly transferred, stored or retranscribed into other commonly used formats such as MSExcel, MSAccess and Lotus123. Individual sensor data can also be added facilitating both sensor identification and performance, giving the user a valuable record and audit tool for all pulse oximetry sensors in use.

For more information on the Electrode Company visit www.electro.co.uk,
