Multiple uses for The Lightman

The Electrode Company Ltd specialises in non-invasive monitoring, optical sensors and high performance pulse oximetry. One of its most successful products, The Lightman[®] SpO₂ sensor tester is the only device on the market today which can test pulse oximeter sensors accuracy. It pinpoints LED or cable problems instantly, on the spot, and without taking the whole system out of circulation.

So, what is the Lightman[®] best used for?

- Pre-purchase sensor evaluation.
- Checking the accuracy of sensors.
- On-ward preventative maintenance.
- Sensor performance in extreme conditions.
- Incoming inspection and repair.

Leading to increased confidence in pulse oximeter data and increased patient safety.

The Lightman[®] therefore gives accurate data, quickly and simply, to allow clinicians to make better informed decisions about their patients.
