Ten sales in six weeks for The Lightman[®] SpO₂ sensor tester

The Electrode Company Ltd specialises in non-invasive monitoring, optical sensors and high performance pulse oximetry. One of its key products, The Lightman[®] SpO₂ sensor tester, is an innovative and unique device that can test pulse oximeter sensor accuracy.

Growing interest in the product has generated ten product sales in the past six weeks, to a selection of hospitals within the UK. The Lightman[®] provides increased confidence in pulse oximeter data,

by testing the sensor accuracy in isolation from the monitor, and LED accuracy for wavelength drift, intensity and incipient failure. Hospitals benefiting from recent purchases include:

Cheltenham • Leicester •
Liverpool • Chertsey •
Wythenshawe • Guernsey •
Cumbria • Dewsbury

For more information or to discuss how your hospital may benefit from its use, please contact the company.
